L13 ANSWER 79 OF 115 BIOTECHDS COPYRIGHT 2004 THOMSON DERWENT/ISI on STN
ACCESSION NUMBER: 2000-01634 BIOTECHDS
TITLE: **Human serine/threonine** protein-
kinases and encoding polynucleotides for diagnosis,
prevention and treatment of cancer, inflammatory diseases and
growth and development disorders;
recombinant protein-kinase production via
vector-mediated gene transfer and **expression** in
e.g. CHO, HeLa or HEK-293 cell culture for therapy

AB The invention provides protein and cDNA sequences for two novel
human protein kinases (2054 and 1958 amino acids resp.),
 which are obtained by searching human genomic sequence database (Reference
 GenBank AC016922) in conjunction with cDNAs prepared and isolated from human

fetal kidney, testis, and **lymph node** mRNAs. The novel protein kinase have sequence homol. to Kinase **serine/threonine** protein kinase as well as Citron kinase from a variety of phyla species. The described genes are mapped to chromosome 12 and a C/G polymorphism is reported for both of them (at nucleotide 5218/6065 resp.). Methods for the preparation of **recombinant** proteins, transgenic animals, and related antibodies are also described. Novel human polynucleotide and polypeptide sequences are disclosed that can be used in therapeutic, diagnostic, and pharmacogenomic applications.

AB This invention provides protein and cDNA sequences for newly identified human proteins, designated NHPs, which shares substantial sequence homol. with animal kinases, and particularly NIMA (never in mitosis A) related kinases, **serine/threonine** kinases, calcium/calmodulin-dependent kinases, and myosin light chain kinases. While NHP shares sequence homol. with other protein kinases, its primary sequence is unique. **Expression** of NHPs can be detected in, inter alia, human cell lines, and human fetal and adult brain, **pituitary**, cerebellum, spinal cord, thymus, spleen, **lymph node**, **bone marrow**, trachea, lung, kidney, fetal and adult liver, prostate, testis, **thyroid**, small intestine, heart, uterus, placenta, mammary gland, adipose, esophagus, cervix, rectum, fetal kidney, and **fetal lung** (SEQID NOS:2 and 4), or human **pituitary**, kidney, **thyroid**, skeletal muscle, and heart cells (SEQ ID NOS: 7 and 9). The described sequences were compiled from sequences available in GENBANK, and cDNAs generated from kidney, testis, trachea, esophagus, **pituitary**, human gene trapped products (SEQ ID NOS: 2 and 4), or **bone marrow** and skeletal muscle mRNAs. In one embodiment, the invention relates to diagnostic assays for detecting diseases associated with inappropriate NHP activity or levels. Also disclosed are methods for

utilizing NHP in drug screening assays and in therapy directed against diseases associated with inappropriate NHP activity or levels.

AB This invention provides protein and cDNA sequences for newly identified human proteins, designated NHPs, which shares structural similarity with animal kinases, including cell division control protein kinases, **serine/threonine** protein kinases and membrane-associated guanylate kinases (MAGUKs). The NHPs are novel proteins that are **expressed** in, inter alia, human cell lines and human fetal and adult brain, **pituitary**, cerebellum, thymus, spleen, **lymph node**, **bone marrow**, trachea, fetal and adult liver, prostate, testis, **thyroid**, adrenal gland, pancreas, salivary gland, stomach, small intestine, colon, uterus, placenta, mammary gland, adipose, esophagus, bladder, cervix, rectum, pericardium, hypothalamus, **ovary**, fetal and adult kidney, and **fetal lung** cells. In one embodiment, the invention relates to diagnostic assays for detecting diseases associated with inappropriate NHP activity or levels. Also disclosed are methods for utilizing NHP in drug screening assays and in therapy directed against diseases associated with inappropriate NHP activity or levels.
